Re: Alert Button System and Classroom Security Cameras

## **Letter of Introduction/Executive Summary**

To Whom It May Concern,

CENTEGIX, LLC (together with its parent, 34ED, LLC, and affiliates Kloud-12 and Dooley Education Solutions) is pleased to submit a proposal to the Gilmer County Board of Education for an Alert Button and Classroom Camera safety solution that incorporates state of the art, campus-wide CrisisAlert™ System, along with classroom cameras and classroom educational video for professional development and virtual learning.

The primary mission of CENTEGIX is implementing innovative classroom and education solutions that protect students and staff and increase student academic achievement. CENTEGIX's proposal includes technologies designed to keep teachers and students safer, provide a way for teachers to grow professionally, and allow students to learn virtually. CENTEGIX represents the future of classrooms in the United States by providing advanced technology to support the two fundamental requirements of educators; the safety of all students, and higher academic achievement.

Providing a safe and secure learning environment is perhaps the single greatest challenge facing K-12 schools, universities and colleges today. CENTEGIX proprietary CrisisAlert™ system provides the tools needed to meet this challenge and protect students and staff from ever-increasing threats. It is a highly unique employee panic system which includes an integrated crisis management platform designed to accelerate crisis awareness, response and management. The powerful blend of hardware, software and wireless technologies is designed specifically to help schools accelerate emergency awareness, response and critical communication when it's needed most. The unique design of the wearable alert badge provides all school employees an instant way to notify appropriate personnel and authorities for a variety of classroom and school incidents or emergencies. Working in conjunction with Centegix classroom camera technology, the CrisisAlert™ system provides critical information and notifications to first responders.

CENTEGIX's 360-degree, 12 mega pixel, 4k classroom cameras provide an additional layer of added security. Motion-detected video recordings are activated and stored on a local NVR

(Network Video Recorder) for access. The use of classroom recordings delivers an additional protection feature to teachers and students by capturing a variety of events in the classroom, such as medical emergencies, theft, and behavior concerns. This method of video documentation provides the needed information for an efficient resolution.

Promoting greater student achievement is the other fundamental requirement of schools. CENTEGIX 4k classroom cameras also provide schools with a professional development platform designed to help teachers enhance instruction through personal video. Utilizing Centegix Kloud-12's industry leading software, teachers can simply and conveniently record, review, reflect, and share lessons with colleagues in their PLCs or collaborate with administrators for effective feedback via virtual observations. With Kloud-12 software technology, teachers can refine technique, adjust teaching styles, and thus achieve better results. Additionally, classroom cameras are rapidly advancing the educational objective of higher academic achievement by enabling teachers to provide students and parents access to recorded lessons for anywhere, anytime, any device learning.

Through Kloud-12, CENTEGIX provides agency districts with the industry's most advanced network video management and distribution system. CENTEGIX is developer, owner, and the only authorized dealer and certified instructional trainer of Kloud-12, a product which allows teachers to easily record, access, and share recorded lessons. Kloud-12 effortlessly turns classroom recording into an automatic observational tool that can promote the safety of students and staff while encouraging higher academic achievement.

CENTEGIX is the only company which provides a comprehensive alert and camera safety system and instructional platform as one integrated system. While both systems can be utilized independently by schools, combining the aspects of all systems into one cohesive and interoperable platform provides educators with the tools needed to keep students both safe and learning simultaneously. Upcoming functionality scheduled to be released in 2019 will provide capabilities for the nearest classroom cameras to be accessed through simple touch-screen activation on designated devices to view the nature of an emergency alert when activated. Additionally, future planned capabilities will allow CrisisAlert™ to integrate with existing school security cameras, providing the most comprehensive view into the nature of an alert, both inside and outside the classroom.

CENTEGIX is excited about this opportunity to partner with Gilmer County Schools to implement our advanced technology solutions to help districts achieve their objectives. A partnership with CENTEGIX will provide optimal value for every student, educator, and administrator throughout the entire school system.

## **Statement Re: Vendor's Financial Stability**

CENTEGIX, LLC (together with its parent, 34ED, LLC, and affiliates Kloud-12, LLC, and Dooley Education Solutions, LLC), has been in continual operation since October 2015. During this time of operation CENTEGIX has been financially stable with steadily increasing revenue year after year. CENTEGIX is fully able to deploy the recommended solution presented within this response.
